

University of Pittsburgh, Pittsburgh Campus **Greenhouse Gas Inventory** **Fiscal Year 2023**

Isabella Cicco

Graduate Research Student, Department of Civil & Environmental Engineering

Aurora Sharrard, PhD

Assistant Vice Chancellor for Sustainability, Office of Sustainability

Melissa M. Bilec, PhD

*Co-Director, Mascaro Center for Sustainable Innovation
George M. & Eva M. Bevier Professor, Department of Civil & Environmental Engineering*

University of Pittsburgh, Pittsburgh Campus **Greenhouse Gas Inventory**

Background

Pitt GHG Emissions Inventory History

1) Past GHG Inventories

- **Fiscal Year 2008** - GHG Inventory Baseline Year
- **Fiscal Years 2011, 2014, & 2017** – Triennial inventories
- **Fiscal Years 2019, 2020, 2021, 2022, & 2023** – Annual inventories starting with Fiscal Year 2019
 - Fiscal Years 2020, 2021, & 2022 were impacted by the COVID-19 pandemic
- **Lead Authors** - Graduate Student from the Department Civil & Environmental Engineering
- **Faculty Advisor** - Melissa M. Bilec, PhD, *Co-Director*, Mascaro Center for Sustainable Innovation;
George M. & Eva M. Bevier Professor, Department of Civil & Environmental Engineering
- Collaborations & Internal review by University Operations
 - FY19 forward - University Sustainability staff lead co-author.

2) University of Pittsburgh GHG Emissions Reduction Goals

- **50% reduction by 2030 below Fiscal Year 2008**
 - Adopted in 2018
- **Carbon neutrality by 2037**
 - Adopted in 2020
 - Pitt Climate Action Plan published in 2022

Acronyms

Acronym	Definition
AASHE	Association for the Advancement of Sustainability in Higher Education
BBP	Bellefield Boiler Plant (Pitt purchases steam from this off-campus facility)
CH ₄	Methane
CO ₂	Carbon dioxide
CO ₂ e	Carbon dioxide equivalents
COVID-19	Coronavirus disease 2019
CSSP	Carrillo Street Steam Plant (Pitt makes steam at this on-campus facility)
FERA	Fuel & Energy-Related Emissions
FTE	Full Time Equivalent
FY	Fiscal Year
GHG	Greenhouse Gas
GWP	Global Warming Potential
LEED	Leadership in Energy and Environmental Design
MMBTU	Million British thermal unit
MT CO ₂ e	Metric tons of carbon dioxide equivalents
Pitt	University of Pittsburgh
REC	Renewable Energy Certificate (1 MWh)
SF	Square Feet
SIMAP	Sustainability Indicator Management & Analysis Platform
T&D	Transmission & Distribution

SIMAP: Inventory Data & Analysis

- **SIMAP (Sustainability Indicator Management & Analysis Platform)**
 - User-friendly, all-in-one carbon and nitrogen-accounting tool designed for higher education campuses.
 - Affordable, online solution to track, analyze, & enhance sustainability efforts across the entire campus.
 - Algorithms are grounded in *Greenhouse Gas Protocol* standards & backed by two decades of experience with the Campus Carbon Calculator, CarbonMAP, & Nitrogen Footprint Tool.
 - [UNHsimap.org/home](https://unhsimap.org/home)
- **Mission** - To assist institutions, colleges, and universities in monitoring their environmental footprints, enabling them to achieve their sustainability goals efficiently & effectively.
 - Assists users in establishing a baseline, benchmarking performance, generating reports, setting goals, analyzing year-over-year progress, & accessing resources.
- As a signatory Second Nature's Climate Leadership Commitments & reflecting best practice in higher education GHG inventorying & benchmarking, **the University of Pittsburgh uses SIMAP to publicly report our GHG emissions data.**

Pittsburgh Campus **Greenhouse Gas Inventory**

Fiscal Year 2023 RESULTS

Executive Summary: FY23 GHG Emissions

- The University of Pittsburgh's Pittsburgh campus **FY23 GHG emissions were 210,319 MT CO₂e**, a 2% decrease from FY19 (the last pre-pandemic-influenced GHG inventory year), and a 22% increase from FY22.
- Increases occurred in all categories except refrigerants, fertilizers, purchased steam, and student commuting.
- The largest increases occurred in the Scope 3 categories of Pitt-Sponsored Travel, including Air & Ground Travel (bus, rail, & car).
As a result, FY22 is now retroactively considered pandemic-influenced.
- GHG emissions are still **23.1% below the FY08 baseline**, but missed the FY23 incremental reduction target to meet 50% reductions by 2030.
- The most current SIMAP emissions factors were used (AR6), causing a slight increase in emissions.

Category		Previous Fiscal Years								Current FY
SCOPE	SOURCE CATEGORY	FY08	FY11	FY14	FY17	FY19	FY20	FY21	FY22	FY23

Notable Changes in FY23

Scope	Category	Variation Compared to FY22	% of Total GHG Emissions	Potential Explanations
2	Electricity	12% ↑	35%	Increased Building Square Footage – Electricity consumption increased due to the addition of over 694,779 in building square footage (including laboratories, which on average use much more energy than other typical campus building use types).
1 & 2	Total Steam (Produced On-Campus & Purchased)	4% ↑	24%	Use Increase – Combined steam consumption (produced & purchased) increased in part due to the addition of over 694,779 in building square footage (up 6%); however, not all of new spaces & buildings use steam. Efficiency - More on-campus steam was used in FY23 than FY22, but Pitt's on-campus steam plant is more efficient than purchased steam from off-campus.
3	Directly Financed Air Travel	185% ↑	14%	More Air Travel - Air travel increased considerably for both Athletics & Pitt-sponsored travel (by employees and students) compared to FY22 Pandemic - Due to an elongated return to pre-pandemic travel habits, all travel increased from FY22; combined air & ground travel is still below FY19 levels.
3	FERA	16% ↑	8%	Fuel Use - FERA increase is related to increase in the use of natural gas, fleet fuel, and purchased electricity.
3	Other Directly Financed Travel (Bus, Car, Rail)	234% ↑	2%	Pandemic - Due to an elongated return to pre-pandemic travel habits, all travel increased from FY22. Data - Personal car reimbursement data included in FY23 (but not in FY22), which also contributes to this increase.

Future GHG Emissions Reduction

- 1) **Growth** - Pitt's continued growth in physical space & population size will outpace efforts focused on reducing GHG emissions; as a result, a redoubling of efforts will be needed across all categories
- 2) **Purchased Electricity** - Remains the largest GHG emissions category.
 - a) More aggressive building energy efficiency retrofits are needed for more buildings more quickly.
 - b) Energy use intensity performance goals for all existing buildings should be revisited.
 - c) Energy performance goals for new buildings should be as rigorous as possible.
 - d) On- and off-campus renewable electricity generation projects and procurement should advance quickly.
- 3) **Clean Energy** - To assist with clean energy sourcing, recommend shifting building systems and components away from natural gas and steam when possible.
- 4) **Steam** – Regardless of source, total usage is up across Scopes 1 & 2, with all drivers not yet identified (i.e., FY23 saw a decrease in Heating Degree Days and an increase in building square footage).
 - a) Recommend analysis of steam use at both the steam system and building scales to facilitate future operational focus on steam use reduction.
- 5) **Travel** – Increased significantly from FY22 and is now returned to near pre-pandemic levels. Increased and focused engagement with the Pitt community is needed on avoiding and/or shifting air travel to ground, along with travel carbon offsets. Reconciliation in SIMAP is also needed.
- 6) **Academics** - Pitt's research & academic community offers tremendous opportunities for innovation and collaboration. Strategically tapping these resources could lead to important reductions and longer-term cultural shifts.

GHG Inventory Overview FY23

University Overview: FY23 Leased Non-Pitt Owned Buildings

Leased space is NOT included in the GHG Inventory Boundary.

The University had **128 leases** in non-Pitt-owned buildings in Pennsylvania, occupying **1,420,876 square feet** of leased space.

This leased space had an estimated **34,662 MT CO₂e** of GHG Emissions in FY23 (equivalent to **16% of total FY23 emissions**).

NOTE: Leased space energy use was estimated using square footage and national average energy use intensity based on primary use.

Pitt Leased Space in Buildings Owned by Others

University Overview: FY23 Population & Student Housing

SCOPE 1

DIRECT EMISSIONS
FROM COMBUSTION

Scope 1: FY23 Trends

SCOPE 1
Direct Emissions
From Combustion

**Scope 1 is
21%
of Total Emissions
[43,888 MT CO₂e]**

■ Scope 3
■ Scope 2
■ Scope 1

Scope 1: Major Sources FY23 Trends

SCOPE 1
Direct Emissions
From Combustion

SCOPE 1 - Emissions Trends Major Sources

Stationary
Sources & Fleet
are
98% of
Scope 1
Emissions

- NOTES**
- Fleet vehicle emissions have relatively increased more than any other category.
 - As Pitt transitions more of our steam needs to the CSSP, on-campus steam has continued to increase.

Stationary Sources

20% of Total Emissions

- NOTES**
- Pitt has Steam emissions in both Scope 1 & 2.
 - Left figure shows Scope 1 GHG emissions only.
 - Right figure shows total steam emissions
 - Scope 1 = On-Campus Carrillo Street Steam Plant
 - Scope 2 = Purchased from Bellefield Boiler Plant

Stationary Sources: Steam & Natural Gas

**Compared to
FY22,
Heating Degree
Days
decreased 4%,
but
building square
footage
increased 7%.**

Fleet Vehicle Fuel Use & Emissions

SCOPE 1
Direct Emissions
From Combustion

0.7% of Total Emissions

Year-To-Year Comparison Fleet Fuel Type

SCOPE 1 EMISSIONS – Fleet Vehicles

NOTES

- Despite being externally contracted, University shuttles are included in this category.
- In FY21, Shuttles shifted from biodiesel to propane.
- In FY23, emissions are up due to an increase in gasoline & propane use.

Scope 1: Minor Sources FY23 Trends

SCOPE 1
Direct Emissions
From Combustion

SCOPE 1 - Emissions Trends Minor Sources

Refrigerants & Fertilizers are 2% of Scope 1 Emissions

- NOTES**
- Refrigerant use varies widely year over year.
 - Fertilizer data entry error was corrected in FY22 forward.

Refrigerants

0.5% of Total Emissions

SCOPE 1
Direct Emissions
From Combustion

Year-To-Year Comparison Refrigerants Used

SCOPE 1 EMISSIONS - Refrigerants

NOTES

- Refrigerants account for less than 1% of total GHG emissions.
- Since FY08, Pitt has switched to refrigerants with lower GWP.
- Refrigerant use varies widely year-over-year.
- ★ Notable shifts in usage

Refrigerants			
Type of Refrigerant	GWP (100 yr)	FY22 (lbs used)	FY23 (lbs used)
★ R-508A	13214	26	0
★ R-507	3985	0	50
★ R-404A	3943	72	39
★ R-408A	2430	15	0
★ R-410A	1924	701	328
R-22	1810	412	286
R-407C	1624	82	92
R-134a	1430	205	186
R-448A	1387	11	0
★ R-123	77	0	400

Fertilizers

< 0.01% of Total Emissions

SCOPE 1
Direct Emissions
From Combustion

Fertilizer Use

SCOPE 1 EMISSIONS - Fertilizers

NOTES

- FY08 – FY21 results include a data entry error relating to nitrogen content.
- FY22 forward, fertilizer use & emissions will appear much larger due to correction of this error.
- Less fertilizer was used in FY23 compared to FY21.

SCOPE 2

INDIRECT EMISSIONS

Scope 2: FY23 Trends

SCOPE 2
Indirect Emissions

Scope 2 is
42%
of
FY23 GHG Emissions
[88,859 MT CO₂e]

Scope 2: FY23 Trends

SCOPE 2 - Emissions Trends

● Purchased Electricity
● Purchased Steam

Purchased Electricity

SCOPE 2 EMISSIONS - Electricity Usage Emissions

NOTES
FY23 electricity use

- Decrease from FY19 (last pre-pandemic year)
- Increase compared to FY22 (primarily due to square footage increase).

Year-To-Year Comparison Total Electricity

Year-To-Year Comparison Total Electricity per Building Sq. ft.

Purchased Electricity - Renewables

SCOPE 2
Indirect Emissions

SCOPE 2 EMISSIONS - Electricity Usage Emissions

- NOTES
- Prior to FY19, only minor REC procurement.
 - Pitt's goal is 50% renewable electricity by 2030 and 100% by 2037.

Renewable Energy Credit Sources

RECs - Annual Variation

Purchased Electricity

35% of FY23 GHG Emissions

SCOPE 2 EMISSIONS - Electricity Usage Emissions

NOTE

- Despite square footage growth from FY08 to present, 48% decrease in electricity-related GHG emissions due to both building efficiency & renewable procurement.

On-Campus Solar Generation

Purchased Steam & Relative Emissions

Year-to-Year Steam Purchased
from Off-Campus Bellefield Boiler Plant
(klbs)

NOTES

- In FY23, purchased steam use & GHG emissions decreased because more on-campus steam was used (Scope 1).
- Total steam use increased (Scope 1 + 2).

8% of Total Emissions

SCOPE 2
Indirect Emissions

SCOPE 2 EMISSIONS - Purchased Steam Emissions

Bellefield Purchased Steam Emissions (MT CO2 eq)	FY08	FY11	FY14	FY17	FY19	FY20	FY21	FY22	FY23

Directly Financed Travel & Study Abroad

SCOPE 3
Other Indirect Emissions

Air Travel

DATA NOTES

- Not adjusted for inflation.
- FY11, FY14, & FY19 - Athletics data not provided.

Bus & Rail Miles

DATA NOTES

- FY23 - Bus & rail use up between FY17 & FY19 levels.
- FY21 & FY22 – Pandemic-influenced

Car Travel - Faculty & Staff

DATA NOTES

- Not adjusted for inflation
- FY23 – Personal car data included & car travel increased significantly.
- Prior to FY19 & FY22 - Personal car travel reimbursement data not provided.

Directly Financed Travel & Study Abroad

16% of Total Emissions

SCOPE 3 – Travel Emissions

- Air Travel
- Ground Travel
- Study Abroad

	FY08	FY11	FY14	FY17	FY19	FY20	FY21	FY22	FY23
Study Abroad	-	1,100	775	4,578	8,816	3,489	153	626	765
Ground Travel	100	50	211	548	582	1,593	683	1,140	3,812
Directly Financed Air Travel	24,800	33,600	23,921	24,706	36,560	10,273	4,018	10,400	29,651

Percentage of Travel Emissions

Scope 3: FY23 Trends – Commuting

SCOPE 3
Other Indirect Emissions

SCOPE 3 - Emissions Trends - Commuting

Commuting
6%
of FY23 GHG
Emissions
(-1% from FY22)

- NOTES**
- Commuting assumptions (& thus emission) had little variation between FY22 & FY23
 - Faculty & staff commuting increased 5% due to an increase in employee count
 - Student commuting decreased 15% due to an increase in students living close to campus & walking.

	FY08	FY11	FY14	FY17	FY19	FY20	FY21	FY22	FY23
Faculty & Staff Commuting	0%	8%	-28%	-9%	71%	13%	-58%	-27%	-22.9%
Students Commuting	0%	6%	17%	15%	131%	98%	-44%	-56%	-62.9%

Commuting

6% of Total Emissions

- DATA NOTES**
- Faculty & staff consistently contribute most commuting emissions.
 - FY23 Student population = 67% of total population, but only 15.5% of commuting GHG emissions (across varied housing locations)
 - Methods shifted in FY22 to be survey-based.
 - Starting in FY21, formal staff flex work arrangements reflected.

SCOPE 3

SCOPE 3 – Commuting Emissions

Drive Alone (Electric Vehicle)	-	0.24%	0.24%	0%

Scope 3 FY23 Trends: Waste, Paper, & Food

SCOPE 3
Other Indirect Emissions

4%
of
FY23 GHG
Emissions
(+0.1% from FY22)

NOTE

Since FY19, all
categories consistent
except Food, which is
pandemic-influenced

SCOPE 3 - Emissions Trends - Waste - Paper & Food

Solid Waste & Wastewater

SCOPE 3
Other Indirect Emissions

Solid Waste
< 1% of
Total
Emissions

Year-To-Year Solid Waste Landfilled & Recycled

SCOPE 3 EMISSIONS - Solid Waste

Year-To-Year Comparison Water and Sewage

SCOPE 3 EMISSIONS - Wastewater

Wastewater
< 0.5%
of Total
Emissions

Food

3% of Total Emissions

Food Purchased

Food Composted

Food Recovered

	FY18	FY19	FY20	FY21	FY22	FY23
Total Food Recovered (lbs)	3	6	9	12	23	18
Total Food Composted (tons)	-	94	176	88	72	52
Total food Purchased (tons)	2,030	-	2,051	1,037	1,700	2,535

SCOPE 3 EMISSIONS - Food

DATA NOTES

- Food emissions category added in FY21
- FY21 & FY22 food volume served was pandemic-influenced.
- Compost activities include yard waste & are not calculated as a carbon offset.

Year-To-Year Comparison
Total Paper Purchased

SCOPE 3 EMISSIONS - Paper

NOTE: Reductions since FY17 due to behavior change from reducing on-campus printing (and thus paper use & associated GHG emissions).

Scope 3: FY22 Updates

In FY22, SIMAP released updated functionalities of Scope 3 accounting.
All 15 GHG Protocol Categories are now included.

SCOPE 3 STRUCTURE THROUGH FY 21

- 1) Commuting
- 2) Business Travel
- 3) Study Abroad
- 4) Food *(new in FY21)*
- 5) Paper
- 6) Waste & Wastewater

SCOPE 3 STRUCTURE FROM FY 22

- 1) Purchased Goods and Services
- 2) Fuel- and Energy-Related Activities
- 3) Waste Generated in Operations
- 4) Business Travel
- 5) Commuting
- ★ 6) Upstream Leased Assets
(Examples include office space and vehicles that are operated and leased by the reporting organization)
- 7) Capital Goods
- 8) Downstream Transportation and Distribution
- 9) Upstream Transportation and Distribution
- 10) Processing of Sold Products
- 11) Use of Sold Products
- 12) End-of-Life Treatment of Sold Products
- 13) Downstream Leased Assets
(emissions generated from the operation of assets owned by the reporting organization & leased to other entities in the reporting year that are not already included in Scope 1 or Scope 2)
- 14) Franchises
- 15) Investments

Not Included
in Pitt GHG Boundary

★ FY23 Estimate of Potential Impact

FERA: Fuel- & Energy-Related Emissions

8% of Total Emissions

- New Scope 3 category in FY22
- Automatically calculated by SIMAP for Scope 1 Stationary Sources & Scope 2 Purchased Electricity
- FERA accounts for all upstream emissions for Scope 1 stationary sources (e.g., direct combustion of fuel or generation of energy); for Pitt this includes:
 - Natural gas combustion from the Carrillo Street Steam Plant
 - Diesel fuel used for fleet vehicles and Pitt’s backup generators.
- At 8% of total GHG emissions, FERA had a significant effect on FY23 emissions, mostly due to natural gas from on-campus steam.

Figure: Lifecycle stages of fuel oil are included in Scope 3 FERA vs. Scope 1.

System Boundaries

Scope 3
Upstream Emissions across supply chain

Scope 1
Direct combustion emissions

SUMMARY

& COMPARISONS

GHG Inventory Overview FY23

Total GHG Emissions +22% from Previous FY

All Scopes Year-To-Year Comparison

Total GHG Emissions **-2% from FY19** (Pre COVID-19 pandemic)

All Scopes Year-To-Year Comparison

GHG Emissions Normalized

GHG Emissions & Full Time Equivalents (FTE)

Fiscal Years 2008 through 2023

GHG Emissions & Square Footage (SF)

Fiscal Years 2008 through 2023

Key FY23 GHG Emissions Takeaways

- 1) Pittsburgh campus population & building square footage are continuing to grow.
- 2) Top 3 GHG emissions sources are electricity, steam, and air travel.
- 3) Building energy use remains the largest contributor to GHG emissions.
- 4) Missed incremental target to reach 50% reduction in GHG emissions by 2030.

FY23 GHG Emissions

*Categories < 1% of emissions not included
